Riken Wrap Cautions

1. Application restrictions:

Please do not use Riken Wrap for non-food applications. Misuses of Riken Wrap such as applying it to the body, using it as a rope substitute, using it for packaging, automotive or medical masking, or rodent-proofing of household appliances can lead to risk of skin inflammation or injury, product degradation, or fire.

2. Keep away from children:

Riken Wrap can cause suffocation if accidentally swallowed. Keep wrap and wrapped foods away from infants and small children.

3. Not intended for use in ovens:

Please do not use Riken Wrap in ovens, toasters, or the oven function of a microwave/toaster oven, as the heat can cause wrap to tear or melt and contaminate food.

4. Microwaving instructions:

When using Riken Wrap for microwave cooking, use a deep dish and ensure that wrap does not come into contact with food. Fold back one edge of the wrap or create a small hole to allow steam to escape. Please exercise caution as heating by microwave longer than the manufacturer's recommended time can overheat and ignite certain vegetables such as spinach.

5. Unusual smells:

Please exercise caution as certain foods, including cow's liver, lotus root, cucumber, papaya, and sweet potato may produce an unusual smell if wrapped directly in Riken Wrap and left in direct sunlight for long periods of time.

6. Heat sources:

Please keep Riken Wrap away from high-temperature heat sources such as a heaters or gas ranges, as these can cause the wrap to stick to the heat source and become difficult to remove.

7. When using Riken Wrap:

Using a hot wire to cut Riken Wrap can produce a slight smell. When using wrap for long periods of time, ensure that the work area is well-ventilated.

8. Handling of boxes:

When stacking multiple boxes, exercise preventative measures to prevent boxes from falling.

9. Storage:

Riken Wrap may pick up smells from other substances, so please store wrap away from strong smelling substances such as mold, soap, perfume, fertilizers, pesticides, etc.

10. Disposal:

Do not dispose of Riken Wrap by burning it in your home. Follow local regulations pertaining to plastic waste.

What makes Riken Wrap unique?

1. Excellent elasticity.

Not only is Riken Wrap's excellent elasticity gentle on foods, it also reduces the physical strain on workers who have to wrap large quantities of food.

2. Superior adhesion.

Riken Wrap has superior adhesion, greatly reducing issues of wrap coming undone at the back of tray packs.

3. Superlative clarity.

Riken Wrap's superlative clarity is conducive to displaying the freshness of food to the greatest degree possible.

4. Minimized surface haze.

In tandem with Riken wrap's superlative transparency, its anti-haze properties also maximize the visual appeal of foods.

5. Safety.

Riken Wrap conforms to the standards #370 and #20, announced by Japan's Ministry of Health, Labor and Welfare and to the standard specified by Japan Hygienic PVC Association.

MA Type

Our MA wrap is an all-purpose wrap for automatic stretch wrap machines, suitable for standard upright machines as well as horizontal pillow-wrap machines. Designed specifically for automatic stretch-wrapping purposes, MA wrap minimizes tearing of film and tray damage. Designed to eliminate water vapor haze to the greatest degree possible, the beautiful finish of your packaged goods will contribute maximum added value to your products

AW Type

Our AW wrap is suited for automatic stretch wrap machines equipped with "super-stretch" capabilities. Designed specifically for automatic stretch-wrapping purposes and featuring extra elasticity, this wrap allows users to utilize a narrower film width than other products. This reduces costs and results in superior packing. Designed to eliminate water vapor haze to the greatest degree possible, the beautiful finish of your packaged goods will contribute maximum added value to your products.
